

Make Your Own Bug Catcher

1. Get an empty plastic fruit container (strawberry containers work great!) and rinse it out.

2. Cut out a door on the top of the container (about the size of a 3x5 index card).

3. Decorate an index card and tape to the top of the container, covering the hole you made in step two. This is your door!

4. Tape all around the edges of the container so the bugs can't get out.

5. Catch some bugs!
