

# Elephant Toothpaste Experiment

## What You Need:

- 2 Tablespoons Warm Water
- 1 Teaspoon Yeast
- Food Coloring
- Hydrogen Peroxide – Either 3% or 6%
- Dish Soap
- Empty Plastic Bottle
- Funnel

## Directions:

1. Combine two tablespoons of warm water with one teaspoon of yeast and mix until the yeast is completely dissolved in the water.
2. Pour 1/2 cup hydrogen peroxide into the empty bottle
3. Add a few drops of food coloring into the bottle
4. Add a squirt of dish soap into the bottle
5. Pour the mixture of water & yeast into the bottle
6. Sit back and watch!

The foam should resemble toothpaste being squeezed from a tube!
